

Task 5

Scenario

The HR department wants to automate frequently used operations by using Stored Procedures.

Task

Part 1 – Create Stored Procedures

1. Create a stored procedure to retrieve all employees from a specific department using DepartmentID as an input parameter.
2. Create a stored procedure to retrieve employees whose salary is greater than a given amount.
3. Create a stored procedure to insert a new employee into the Employees table.
4. Create a stored procedure to update an employee's salary using EmployeeID.
5. Create a stored procedure to delete an employee record using EmployeeID.

Part 2 – Execute Stored Procedures

Execute each stored procedure with different input values and verify the results.

Deliverables

- A single SQL script file (Day5_SQL_Task.sql) containing all stored procedures and execution statements.
- Screenshots (or exported results) showing the output of each stored procedure.

Expected Completion Time: 1 day.
